

TURN ENERGY DATA INTO ACTION.™

Unlock insights into energy consumption, emissions impact, and savings opportunities

Making progress on your decarbonization goals and business objectives can be a daunting challenge. The impacts of electrification, rising power supply, and equipment costs can create significant hurdles adding to the pressure of deciding between executing important investments and establishing opportunities to lower operating expenses and emission reductions.

NextEra 360™ comprehensive energy management software unlocks data-driven insights to accelerate your decarbonization journey by enabling sophisticated energy strategies, prioritizing interventions, and unlocking market trading opportunities.

Solution Features

Connect energy data across assets and sites. Integrate a wide range of energy-producing and consuming equipment with secure, easy-to-install edge devices or APIs.

Collect and aggregate energy data. Use fast, simple, and secure processes without the hassle of manual uploads or time-consuming custom software integrations across various systems.

Simplify energy asset management. Optimize charge and discharge schedules and control distributed energy resources.

Make better energy and trading decisions. Customize strategies using load, generation, price forecasts, and site constraints, tailored to your risk tolerance and business objectives.

Business Outcomes

- » **Enhance energy data resolution** for improved operational awareness and strategic decision-making
- » **Track the progress of sustainability goals** with visibility into energy usage and carbon emissions
- » **Eliminate manual processes** by automating load control and onsite generation to drive profitability, reduce O&M costs, and lower emissions
- » **Realize 20-30% incremental value** over manual trading by maximizing value capture through customized trading strategies used by NextEra's energy trading team on 3GWh of storage assets in CAISO and other markets

Ready to see real results with your clean energy trajectory?

Ready to benefit from real savings?

If so, NextEra 360 is ready to help you get there.

Turn energy data into action and unlock real savings

Using a combination of hardware and software, NextEra 360 integrates a wide range of energy assets, smart meters, and building management systems with APIs and edge devices to eliminate data gaps and enhance energy data resolution and provides AI-powered analysis to identify generation and usage opportunities.

About Us

Built on 15 years of experience, we analyze ~23 billion data points daily, with ~30 GW of renewable assets in operations, and ~\$160 billion+ in total assets. The NextEra Analytics team developed NextEra 360 comprehensive energy management software to reduce energy costs and carbon emissions, manage risks, optimize asset performance, and improve return on investments. We bring that experience to you no matter where you are in your decarbonization journey.
